Audi A4 1.9TDI Original 110 HP / Date Manufacture Year 1998
KM first run 489537KM
Measured 102HP and 240NM
KM second run 491713KM
Measured 112HP and 260NM

The customer came to us to carry out a test without and afterwards with Microlon. The recorded difference is as follows:
An increase of 10 bhp and 20NM
This was a really amazing result.
In the past we have tested other products that made claims to improve bhp and NM (torque), none of them ever showed positive results.
We were surprised by the improvement made by the use of Microlon after the results test, but the facts are there.
We have never experienced improvements like this before.
It is really unique. The test was performed on our Dynostarbank. This equipment is approved and calibrated every year.
The Microlon engine kit improved power from 102 bhp to 112 bhp, this was conducted on a hotter day than the initial test on the untreated engine.
It is a disadvantage when the temperature is high, as the effective capacity is less. So the results are very good.
The diagram clearly shows the improvement, the vehicle has not been altered with any other product to alter the final results.
