Dear Mr. Smeets,

In the past few weeks I have already droven more than 6250 miles after I had treated my engine in July 2011 with the Microlon Engine Treatment in my Renault Espace a 2.2 liters Turbo Diesel Engine. It is a Renault from 2005 and it had 156875 Miles on the clock.

I'm pleased to note that when starting up the engine the cooling fan doesn't work every 5 minutes what he did before, now he doesn't do that anymore, so the Microlon is already successful. For me the sign that internal friction clearly decreased.

While driving, which I often do with a speed of 88 Miles/pro hour, showed that the diesel consumption has fallen considerably. I drove for the treatment typically with 1 Gallon > 4,55 Miles and now after the treatment is it increased to 1 Gallon > 5,20 Miles. So a fuel saving of **14.6%** in fuel economy. This means that I now at this moment can drive with a fully fueled tank a 75 Miles further.

I totally love this because I was frightened of the use of diesel from this car. I drive about a 34375 Miles a year. I hope that you have sufficiently enough information from my experience with your product the Microlon Engine Treatment.

Sincerely,

Ed Koers
